

## 5. Additions to the last newsletter (2/2023) – Modifications in cleaning regime:

N° IDTF	Product name	Cleaning regime	Publication date	Mandatory from
10118, 10119, 10042 10046 10152, 10153, 10155, 10175, 10176, 10177, 10178	See IDTF	<p>Removed from Important requirements: “Qualimat Transport standard defines specific requirements for compound feed, from 1 January 2016. These requirements are based on the obligation of introduction of control measures for the prevention of interbatch transfers, taking into accounts the specific instructions provided by the customer. In the case of exclusive transport compound feed (no transportation of raw materials, additives or premixes), minimum cleaning level changes from level forbidden to level A, completed by control measures in order to prevent interbatch transfers, taking into account the specific instructions given by the instructing party. These specific instructions may aim to prevent contamination of the product by processed animal proteins (PAP) whose use is regulated (processed animal proteins derived from porcine animals / poultry/ insects) or prohibited under Regulation EC 999/2001. A purge is necessarily carried out in the case of successive changes of compound feed from different manufacturers. This purge is applied to the entire container or reduces to the box or boxes concerned. Achieving this specific measure must be recorded. Purge is defined as an action to ensure full vacuum container through integrated systems (pushing air or pressurized in the circuits). In the absence of integrated system, the vacuum must be provided by a mobile blow-box system and a mechanical removal of residues. All requirements are detailed in "Cahier des Charges Qualimat Transport V6" online on the website <a href="http://www.qualimat.org">www.qualimat.org</a>, in the page "les documents de référence”</p>	23/10/2023	23/10/2023
