TS1.8 - Labelling

Version EN: 1 March 2021

Index

1. LABELLING	3
1.1. GENERAL	3
1.2. LABELLING OF BY-PRODUCTS OF THE OILS AND FATS INDUSTRY	3
2. POSITIVE DECLARATION	4
APPENDIX 1: EXAMPLES OF POSITIVE DECLARATION	5
APPENDIX 2: PRODUCT NAME AND NUMBER ACCORDING TO REG. (EU) NO. 68/2013 ...	14

1. Labelling

1.1. General

The GMP+ certified company must ensure that the labelling and delivery of the feed which it delivers complies with the applicable legislation for both the country in which the certified company is located and the country in which the feed is marketed. See R 1.0 *Feed Safety Management Systems Requirements* § 4.1.

The product information required by national and international legislation must be provided on delivery to the customer. The documentation with respect to delivery must be clear.

1.2. Labelling of By-products of the oils and fats industry

The following requirements apply to producers of by-products from the oil and fat industry.

When a by-product of the oils and fats industry is being sold, the product name (including botanical origin) and number according to [Reg. \(EU\) No 68/2013](#), as amended, must be declared (see [Annex 2](#) to this document).

When composite products are sold, the names and numbers of all ingredients must be mentioned.

These labelling requirements apply for all origins, European Union and non-European Union.

Note: Although not addressed in every scheme as a feed safety issue, the GMO labelling must also comply with European Union legislation.

2. Positive declaration

The certified company must make the status of the delivered feed or service clear to the customer. This must be done using a positive declaration for all feed and services assured under its GMP+ Feed Safety Management System.

The obligation to inform the customer via a positive declaration applies to delivery to:

- a. GMP+ certified customers, or;
- b. customers who are certified under another certification scheme which has been declared to be equivalent to the GMP+ FC scheme (see TS 1.2 *Purchase*), or;
- c. livestock farmers.

The positive declaration must:

- a. be communicated in writing
- b. must contain wording as described in [Annex 1](#) or a translation of the English wording
- c. be in clear reference to the delivered feed or service
- d. be written in the official language (or at least one of the official languages) of the country where the feed is marketed or a language understood by the customer
- e. be unambiguous/clear to ensure a mutual understanding between seller and customer about the status of the feed or service.

Translations of positive declarations can be found in [Annex 1](#) below.

Appendix 1: Examples of positive declaration

English

Statements for placing feed on the market	Statements for delivery of service
The goods delivered are GMP+ FSA assured	The service delivered has the GMP+ status as specified in the GMP+ FSA module
The goods delivered have the GMP+ status as specified in the GMP+ FSA module	The service to be delivered has the GMP+ status as specified in the GMP+ FSA module
The feed delivered has the GMP+ status as specified in the GMP+ FSA module	The service delivered is GMP+ FSA assured
The feed to be delivered has the GMP+ status as specified in the GMP+ FSA module	The service to be delivered is GMP+ FSA assured

Appendix 2: Product name and Number according to Reg. (EU) No. 68/2013

Number	Name	Description	Examples of products falling under this number
13.6.1	Acid oils from chemical refining ¹	Product obtained during the deacidification of oils and fats of vegetable origin by means of alkali, followed by an acidulation with subsequent separation of the aqueous phase, containing free fatty acids, oils or fats and natural components of seeds, fruits tissues such as mono- and diglycerides, crude lecithin and fibres.	
13.6.2	Fatty acids esterified with glycerol ²	Glycerides obtained by esterification of fatty acids with glycerol. May contain up to 50 ppm Nickel from hydrogenation.	
13.6.3	Mono di and tri glycerides of fatty acids ²	Product consisting of mixtures of mono-, di- and triesters of glycerol with fatty acids. They may contain small amounts of free fatty acids and glycerol. May contain up to 50 ppm Nickel from hydrogenation.	
13.6.4	Salts of fatty acids ²	Product obtained by reaction of fatty acids with at least four carbon atoms with calcium, magnesium, sodium or potassium hydroxides, oxides or salts. May contain up to 50 ppm Nickel from hydrogenation.	Analysis should be done on the fat component (e.g. PFAD) or on the end-product.
13.6.5	Fatty acid distillates from physical refining ¹	Product obtained during the deacidification of oils and fats of vegetable origin by means of distillation containing free fatty acids, oils or fats and natural components of seeds, fruits tissues such as mono- and diglycerides, sterols and tocopherols.	
13.6.6	Crude fatty acids from splitting ¹	Product obtained by oil/fat splitting. By definition it consists of crude fatty acids C ₆ -C ₂₄ , aliphatic, linear, monocarboxylic, saturated and unsaturated. May contain up to 50 ppm Nickel from hydrogenation.	

1. The name shall be supplemented by the indication of the botanical or animal origin.

2. The name shall be amended or supplemented to specify the fatty acids used.

Number	Name	Description	Examples of products falling under this number
13.6.7	Pure distilled fatty acids from splitting ¹	Product obtained by the distillation of crude fatty acids from oil/fat splitting potentially plus hydrogenation. By definition it consists of pure distilled fatty acids C ₆ -C ₂₄ , aliphatic, linear, monocarboxylic, saturated and unsaturated. May contain up to 50 ppm Nickel from hydrogenation.	Ricin oleic acid (syn. Castor oil acid), CAS no.141-22-0, EC no. 205-470-2 Icosa-5,8,11,14-tetraenoic acid (syn. Arachidonic acid), CAS no. 506-32-1, EC no. 208-033-4 Hexanoic acid (syn. Caproic acid) of vegetable origin, CAS no.142-62-1, EC no. 205-550-7; Octanoic acid (syn. Caprylic acid) of vegetable origin, CAS no.124-07-2, EC no. 204-677-5 Oleic acid (syn. octadec-9-enoic acid) of vegetable origin, CAS no. 112-80-1, EC no. 204-007-1 Linoleic acid (syn. 9,12-Octadecadienoic acid), CAS no. 60-33-3, EC no. 200-470-9 Linolenic acid (syn. (9Z,12Z,15Z)-9,12,15-Octadecatrienoic acid), CAS no. 463-40-1, EC no. 207-334-8 Stearic acid (syn. octadecanoic acid) of vegetable origin, CAS no. 57-11-4, EC no. 200-313-4
13.6.9	Mono- and diglycerides of fatty acids esterified with organic acids ^{2 3}	Mono- and diglycerides of fatty acids with at least four carbon atoms esterified with organic acids.	
13.6.10	Sucrose esters of fatty acids ²	Esters of saccharose and fatty acids.	
13.6.11	Sucroglycerides of fatty acids ²	Mixture of esters of saccharose and mono and di-glycerides of fatty acids.	
13.11.2	Mono-esters of propylene glycol and fatty acids ²	Mono-esters of propylene glycol and fatty acids, alone or in mixtures with di-ester	

3. The name shall be amended or supplemented to specify the organic acid.

Feed Support Products

That was a lot of information to digest and one might ask, what is the next step? Luckily we can offer support for the GMP+ Community when doing this. We provide support by means of various tools and guidances but as each company has a shared responsibility to feed safety, and therefor tailor-made solutions cannot be offered. However, we do help by explaining requirements and provide background information about the requirements.

We have developed various supporting materials for the GMP+ Community. These include various tools, ranging from Frequently Asked Questions (FAQ) lists to webinars and events.

Supporting materials related to this document (Guidelines and FAQ's)

We have made documents available which give guidance to the GMP+ requirements as laid down in the module GMP+ FSA and GMP+ FRA. These documents give examples, answers to frequently asked questions or background information.

Find our Risk Management tools here:

More information: [GMP+ Platform](#)

We enable every company in the
feed chain to take responsibility for
safe and sustainable feed.
